Canadian Data Report of
Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1 - 25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26 - 160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des
sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statisiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statisiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Morris, J. F. T., Trudel, M., Thiess, M. E., Zubkowski, T. B., and MacLean, H. R. 2007. *CCGS W.E. Ricker* Gulf of Alaska salmon survey, June 12-19, 2004. Can. Data Rep. Fish. Aquat. Sci. 1194: 150 p.

The Highseas Salmon program of Fisheries and Oceans Canada conducted a survey of Pacific salmon in the Gulf of Alaska from June 12-19, 2004. The objectives of the Highseas Salmon program's surveys are to (1) evaluate the distribution and ecology of juvenile Pacific salmon (*Oncorhynchus spp.*) during their first year in the ocean, (2) describe the ambient oceanographic conditions, and (3) quantify the biomass of zooplankton. On this survey, fish, oceanographic, and zooplankton sampling was conducted at stations from Barkley Sound on the west coast of Vancouver Island in British Columbia (48.9° N) to Forrester Island in Southeast Alaska (54.7 ° N).

An estimated total of 20,251 Pacific salmon were caught on the survey. Of these, 3388 were juvenile pink salmon (*O. gorbuscha*), 8864 were juvenile chum salmon (*O. keta*), 3868 were juvenile sockeye salmon (*O. nerka*) and 179 were juvenile coho salmon (*O. kisutch*) in their first spring in the ocean and 3579 were chinook salmon (*O. tshawytscha*) under 350 mm in fork length.

Juvenile pink, chum, sockeye, coho, and chinook salmon were caught along the northward migration route through Queen Charlotte Sound, Hecate Strait, Dixon Entrance, and off Southeast Alaska. In addition, juvenile chum, sockeye, coho, and ocean-ecotype chinook that were age 0.0 and less than 100 mm in fork length, were caught in high numbers in Barkley Sound and Quatsino Sound on the west coast of Vancouver Island.

Juvenile pink, chum, sockeye, and coho were significantly greater in size from north to south, which supports the contention that juvenile salmon are migrating through Queen Charlotte Sound, Hecate Strait, and Dixon Entrance and up along Southeast Alaska in the late spring and summer, and that the larger individuals are swimming faster and leading the migration.

Ten CWT juvenile chinook and coho that had been spring, 2004 releases in the Columbia-Snake River were recovered. Seven were stream-type, age 1.0 juvenile chinook, of which six were recovered on the west coast of Vancouver Island and one in Hecate Strait. Three were age 1.0 juvenile coho, of which one was recovered was recovered near Forrester Island in Southeast Alaska, and two were recovered off the west coast of Vancouver Island.

RÉSUMÉ

Morris, J. F. T., Trudel, M., Thiess, M. E., Zubkowski, T. B., and MacLean, H. R. 2007. Campagne d'évaluation des saumons dans le Golfe de l'Alaska à bord du *CCGS W.E. Ricker* du 12 au 19 juin 2004. Can. Data Rep. Fish. Aquat. Sci. 1194: 150 p.

Le programme canadien des Saumons en Haute Mer de Pêches de Océans Canada a réalisé une étude sur les saumons du Pacifique dans le Golfe de l'Alaska du 12 au 19 juin 2004. Les objectifs de cette étude était de (1) évaluer la distribution et l'écologie des saumons du Pacifique (*Oncorhynchus* spp.) juvéniles durant leur première année en mer, (2) décrire les conditions océanographiques ambiantes, et (3) quantifier la biomasse de zooplancton. Nous avons mesuré les conditions océanographiques et échantillonné le zooplancton et les poissons à des stations situées entre le détroit de Barkley sur la côte ouest de l'Île de Vancouver (48.9° N) et l'Île de Forrester dans le sud-est de l'Alaska (54.7° N).

Environ 20,251 saumons du Pacifique ont été capturés durant cette étude, incluant : 3388 saumons roses (*O. gorbuscha*) juvéniles, 8864 saumons kétas (*O. keta*) juvéniles, 3868 saumons rouges (*O. nerka*) juvéniles, 179 saumons coho (*O. kisutch*) juvéniles durant leur premier printemps en mer, et 3579 saumons quinnats ayant une longueur à la fourche inférieure à 350 mm.

Les saumons roses, kétas, rouges, coho et quinnats juvéniles ont été capturés le long d'un couloir migratoire nord-sud entre le détroit de la Reine Charlotte, le détroit de Hécate, le détroit de Dixon, et dans le sud-est de l'Alaska. De plus, les saumon kétas, rouges et coho juvéniles ainsi que les samons quinnats de types océaniques (âge 0.0) et qui avaient une longueur à la fourche inférieure à 100 mm ont été capturés en grand nombre dans le goulet de Barkley et le goulet de Quatsino sur la côte ouest de l'Île de Vancouver.

Les saumons roses, kétas rouges et cohos juvéniles étaient significativement plus grands au nord qu'au sud de l'aire d'étude, ce qui supporte l'hypothèse selon laquelle les saumons traversent le détroit de la Reine Charlotte, le détroit de Hécate, et le détroit de Dixon à la fin du printemps et durant l'été lors de leur migration, et que les individus les plus grands nagent plus rapidement et débutent leur migration avant les petits individus.

Dix saumons quinnats et coho juvéniles marqués à l'aide d'un CWT et qui ont été transférés dans le système de la rivière Columbia et la rivière Snake au printemps 2004 ont été capturés, incluant sept saumons quinnats de types océaniques (âge 1.0) et trois saumons cohos juvéniles (âge 1.0). Six de ces sept saumons quinnats ont été capturés sur la côte ouest de l'Île de Vancouver et dans le détroit de Hécate. Un des saumons cohos juvéniles a été capturé près de l'Île de Forrester dans le sud-est de l'Alaska, alors que les deux autres ont été capturés sur la côte ouest de l'Île de Vancouver.

INTRODUCTION

The Highseas Program of Fisheries and Oceans Canada has conducted annual Pacific salmon surveys in the Gulf of Alaska since 1995 [1-28]. The main objectives of these surveys were to collect information on (1) the distribution and ecology of Pacific salmon (*Oncorhynchus spp.*) during their ocean phase, (2) the ambient oceanographic conditions, and (3) the distribution and biomass of zooplankton.

This report documents the data collected for the survey completed from June 12 to June 19, 2004. The survey design comprised fish, oceanographic and zooplankton sampling along transects and at opportunistic stations spanning the area from the west coast of Vancouver Island to Forrester Island off the coast of Southeast Alaska (54.7° N).

MATERIALS AND METHODS

General Survey Information

Figures 1, 2, and 3 show the fishing, oceanographic and zooplankton stations, respectively, completed by the *CCGS W.E. Ricker* on the June 12-19, 2004 survey. A total of 45 fishing stations, 47 oceanographic stations, and 47 zooplankton stations were completed.

The survey conducted scientific operations off the west coast of Vancouver Island, in Queen Charlotte Sound, in Hecate Strait, in Dixon Entrance, and off Southeast Alaska. Four of the Highseas Salmon program's standard cross-shelf transects were completed: the Estevan Point transect on the west coast of Vancouver Island, the Hecate Strait transect, the Triangle Island transect across Queen Charlotte Sound, and the Forrester Island transect off Southeast Alaska.

Fishing Gear and Fishing Operations

The survey was conducted on the *CCGS W.E. Ricker*, a stern trawler 58 m in length which is powered by a 2,500 H.P. model AH 40 Akasaka diesel engine.

The *CCGS W.E. Ricker* towed a mid-water trawl, originally manufactured by Cantrawl Nets Ltd., Richmond, BC, and later modified to a model 240 trawl. The trawl has a heavy-duty front end of hexagonal web made from 3/8 in. (9.5 mm) and 5/16 in. (7.9 mm) Tenex rope, and a tapered body made-up of 64 in. (163 cm), 32 in. (81.3 cm), 16 in. (40.6 cm), 8 in. (20.3 cm) and 4 in. (10.2 cm) polypropylene sections, an intermediate section of 3 in. (7.6 cm) polypropylene, and a codend of 1.5 in. (3.8 cm) knotted nylon lined with 0.25 in. mesh (64 mm). The trawl has three 40 m bridles of 5/8 in. (1.6 cm) wire rope per side that are attached with a single hook-up to 5 m Jet doors. Typically, 150 m of 1.25 in. (3.2 cm) warp was paid out to tow the trawl at the surface.

The *CCGS W.E. Ricker* was able to tow the trawl at the surface at 5 knots (2.6 m s^{-1}) in good sea conditions, and this typically achieved a mouth opening of approximately 28 m wide by 16 m deep as measured acoustically by a Scanmar trawl eye mounted on the headrope.

Oceanographic Sampling

At oceanographic stations, the scientific crew (1) conducted CTD (conductivity-temperature-depth) casts, (2) collected surface seawater samples with a Niskin bottle for nitrate, phosphate, silicate, and salinity, and (3) filtered surface seawater on GF/F glass fibre filter disks for chlorophyll *a*.

Nitrate, phosphate, and silicate samples were collected in acid-washed glass test tubes, and the glass fiber disks were folded and placed in polypropylene scintillation vials. All these samples were stored frozen.

CTD casts were conducted to 250 m or within 5 m of the bottom with a Seabird SBE 911+ probe. Several calibration samples from selected CTD casts were collected over the course of the survey with Niskin bottles at depths where the salinities were stable.

Zooplankton Sampling

Vertical bongo tows to approximately 150 m or within 10 m of the bottom were conducted with two 57 cm diameter, 253 μm Nitex nets. One of the nets was equipped with a flowmeter.

Zooplankton collected from the net with the flowmeter were preserved in 10% formalin and sent to the zooplankton laboratory at the Institute of Ocean Sciences, Fisheries and Oceans Canada (Sidney, BC) for species classification and enumeration. Zooplankton taken from the net without flowmeter were sorted into four size fractions by successively sieving through 8.0, 1.7, 1.0, and 0.25 mm screens. Each size fraction was weighed wet, dried at 60°C for 48 hours, re-weighed, and stored in plastic bags for future stable isotope, bomb calorimetry, and proximate analyses.

RESULTS

Salmon Catch Data

Tables 1 and 2 report information on trawl tows and a summary of Pacific salmon catches for this survey. Tow information includes: station ID, transect name, sampling region, date and time, start latitude (°N) and longitude (°W), heading (°T; degrees true), and bottom depth (m). Station ID numbers consisted of the Pacific Biological Station cruise designation ("HS200417", where HS stands for High Seas), followed by a tow number (e.g., "HS200417-IVI01" for a tow #1 inside the inlets on the west coast of Vancouver Island, British Columbia). The station ID number serves as the primary key

in the High Seas salmon database that links fishing tow information with the oceanographic and zooplankton tables.

In Table 1, catch totals for each tow are provided for all chinook salmon (*O. tshawytscha*) ("CK") that includes all ages and size classes, and separately for juveniles and adults of chum salmon (*O. keta*) ("CM"), coho salmon (*O. kisutch*) ("CO"), pink salmon (*O. gorbuscha*) ("PK"), and sockeye salmon (*O. nerka*) ("SE"). In this report, "juveniles" are defined as fish in their first spring in the ocean (age X.0+), while "adults" include all older age groups (age X.1+ or older). Age separation was determined based on examination of size distributions (fork length) which showed non-overlapping size modes for pink, chum, coho, and sockeye salmon (Figure 20). Chinook salmon were not divided into juveniles and adults based on size since there is considerable overlap among size modes that represent the multiple age groups (Figure 20).

In Table 2, catch totals for each tow are provided for all chinook salmon (*O. tshawytscha*) ("CK") that includes all ages and size classes, and for the following size classes: chinook less than 100 mm in fork length, chinook from 100 to 199 mm, chinook from 200 to 299 mm, chinook from 300 to 349 mm, chinook from 350 to 399 mm, chinook from 400 to 499 mm, and chinook greater than 500 mm.

The abbreviations for the regions in tables 1-6 are:

SEA	Southeast Alaska
DE	Dixon Entrance
HS	Hecate Strait
QCSD	Queen Charlotte Sound
VI	West coast Vancouver Island
IVI	Inlets on the west coast of Vancouver Island

Biological Data

Table 3 reports the detailed biological data collected from each Pacific salmon caught during the survey. Individual salmon were assigned a fish number which consisted of the cruise identifier (e.g., "HS200417"), followed hierarchically by tow number, species code, and sample number. For example, "HS200417-DE01-124-001" refers to tow number DE01 or tow #1 in Dixon Entrance, species code "124" for chinook salmon, and the sample number "001" (within tow and species). We used the following codes from Fisheries and Oceans' Salmon Stock Assessment database: 108, pink salmon; 112, chum salmon; 115, coho salmon; 118, sockeye salmon; and 124, chinook salmon.

Biological data collected for individual salmon includes species common name, fork length (mm), whole body weight (g wet), sex, stomach content weight (g wet), % water (based on the ratio of dry to wet whole body weight), coded wire tag number, pit tag number, and observed fin clip.

Catch Distributions

In general, juvenile pink (age 0.0), chum (age 0.0), and sockeye (age X.0) salmon that were in their first spring at sea were caught along the northward migration route in the late spring and summer through Queen Charlotte Sound, Hecate Strait, Dixon Entrance, and off the west coast of Southeast Alaska (Figures 4, 5, and 6). Juvenile pink, chum and sockeye catches were higher on the eastern side of Hecate Strait and Queen Charlotte Sound, where they averaged 610, 288, and 720 fish per tow, than further north in Dixon Entrance and Southeast Alaska, where they averaged just 25, 0.3, and 9.6 fish per tow. Juvenile chum were also caught at an average of 813 and 666 fish per tow in Barkley Sound and Quatsino Sound on the west coast of Vancouver Island (Figure 5). Juvenile sockeye averaged 70 and 13 fish per tow on the west coast of Vancouver Island in Barkley Sound and on the shelf off Quatsino Sound (Figure 6).

Juvenile coho (age X.0) were caught at an average of 4 fish per tow and up to 25 fish per tow throughout the survey region (Figure 7).

Juvenile chinook under 100 mm in fork length were caught at an average of 692 fish per tow in Trevor Channel and Imperial Eagle Channel in Barkley Sound on the west coast of Vancouver Island (Figure 8). These juvenile chinook averaged 86 mm in fork length. They were all most likely age 0.0, ocean ecotypes in their first year at sea. In support of this assumption, two coded-wire-tagged (CWT) chinook from the Robertson Creek hatchery, that were age 0.0 and that measured 83 and 86 mm, were recovered in these tows (Table 6).

Juvenile chinook within the size classes 100 to 199 mm, 200 to 299 mm, and 300 to 349 mm were caught at the low averages of 1.4, 0.6, and 0.7 fish per tow and up to 23, 4, and 13 fish per tow throughout the survey region (Figures 9, 10, and 11).

Adult chinook within the size classes 350 to 399 mm, 400 to 499 mm, and greater than 500 mm were caught at the low averages of 0.6, 0.7, and 0.6 fish per tow and up to 9, 10, and 8 fish per tow throughout the survey region (Figures 12, 13 and 14).

Adult pink, chum, sockeye, and coho were caught primarily both in the northern part of the survey off Southeast Alaska and in Dixon Entrance, and in the southern part off the west coast of Vancouver Island at the low averages of 1.0, 2.7, 0.3, 2.4 fish per tow and up to 17, 31, 5, and 27 fish per tow, respectively (Figures 16, 17, 18, and 19).

Size Comparisons of Juvenile Salmon Among Regions

Figure 20 shows the length frequencies for each species of salmon caught on the survey. Juvenile pink (age 0.0), chum (age 0.0), sockeye (age X.0), and coho (age 1.0) averaged 119.0, 112.3, 118.5, 187.2 mm in forklength with standard deviations of 16.3, 19.8, 23.9, and 38.5 mm, respectively.

Juvenile pink, chum, sockeye, and coho increased significantly in size from north to south ($F = 117.9$, $p<0.001$; $F = 461.8$, $p<0.001$; $F = 635.3$, $p<0.001$; and $F = 22.0$, $p<0.001$) (Figures 21, 22, 23, and 24), which supports the hypothesis that juvenile salmon are migrating through Queen Charlotte Sound, Hecate Strait, and Dixon Entrance and up along Southeast Alaska in the late spring and summer, and that the larger individuals are swimming faster and leading the migration. Juvenile pink averaged 111.2 mm in Queen Charlotte Sound, 123.4 mm in Hecate Strait, 116.1 mm in Dixon Entrance, and 138.0 mm off Southeast Alaska (Figure 21). Juvenile chum averaged 102.5 mm within the inlets on the west coast of Vancouver Island, 125.8 mm in Queen Charlotte Sound, and 134.7 mm in Hecate Strait (Figure 22). Juvenile sockeye averaged 86.9 mm within the inlets on the west coat of Vancouver Island, 142.8 mm on the shelf off the west coast of Vancouver Island, 115.3 mm in Queen Charlotte Sound, 126.9 mm in Hecate Strait, and 166.4 mm off Southeast Alaska (Figure 23). Juvenile coho averaged 164.6 mm within the inlets on the west coast of Vancouver Island, 209.8 mm on the shelf off the west coast of Vancouver Island, 185.9 in Queen Charlotte Sound, 190.2 in Hecate Strait, 193.7 mm in Dixon Entrance, and 222.5 mm off Southeast Alaska (Figure 24).

It was not possible to make a regional comparison of sizes of juvenile chinook for specific ocean age classes due to the considerable overlap among size modes that represent multiple age groups (Figures 20 and 25).

CWT Recoveries

Table 6 reports the details on the coded wire tag (CWT) salmon caught during the survey. Reported information includes: the coded wire tag number, the assigned fish number, species common name, the date and region of recovery, the fork length (mm) at capture, the release area, the name of the agency and hatchery that released the tagged fish, the brood year, and dates of first and second hatchery releases.

The abbreviations for release agencies in Table 6 are:

CDFO	Canadian Department of Fisheries and Oceans
COOP	Washington Department of Fisheries - Cooperative
ELWA	Lower Elwha Klallam Tribe (WA)
FWS	U.S.A. Fisheries and Wildlife Service
LUMM	Lummi Tribe (WA)
NEZP	Nez Perce Tribe (ID)
ODFW	Oregon Department of Fish and Game
WDFW	Washington Department of Fish and Wlidlife
YAKA	Yakama Tribe (WA)

The abbreviations for release areas in Table 6 are:

CECR	Central Columbia River
COBC	Coastal British Columbia

HOOD	Hood Canal
JUAN	Strait of Juan de Fuca
LOCR	Lower Columbia River
NOOK	Nooksack R - Samish R
SKAG	Skagit R
SNAK	Snake R
STIL	Stillaguamish R - Snohomish R
UPCR	Upper Columbia River
WCVI	west coast Vancouver Island, B.C.

Twelve juvenile CWT chinook were recovered on this June, 2004 survey. Of these, seven were stream-type, age 1.0 chinook from the Columbia-Snake River that were recovered on the west coast of Vancouver Island and in Hecate Strait, three were stream-type, age 1.0 chinook from Puget Sound that were recovered on the west coast of Vancouver Island, and two were ocean-type, 0.0 age chinook from the Robertson Creek hatchery that were recovered locally in Barkley Sound on the west coast of Vancouver Island.

Five juvenile (age 1.0) CWT coho were recovered. Of these, there was one from the Columbia-Snake River that was recovered near Forrester Island in Southeast Alaska, two also from the Columbia-Snake River that were recovered off the west coast of Vancouver Island, and one from the Juan de Fuca production region in Washington State that was recovered off the west coast of Vancouver Island.

Oceanographic Data

Table 4 reports the physical oceanographic data collected during the survey, including the station ID number, transect, region, the date and time in UTC, the latitude (^{o}N) and longitude (^{o}W), sea surface temperature (SST; ^{o}C), and salinity (SSS; ppt) taken from the CTD files, sea surface salinities (ppt) determined from the sample bottles that were used to calibrate the CTD probe, nitrate, silicate and phosphate concentrations (μmol L^{-1}), and chlorophyll *a* (μg L^{-1}).

The contact procedure to obtain the CTD files is available at:

http://www-sci.pac.dfo-mpo.gc.ca/osap/data/default_e.htm

Zooplankton Data

Table 5 reports the zooplankton data by station collected by the Bongo tows, including the station ID number, transect, region, latitude (^{o}N) and longitude (^{o}W), bottom depth (m), the date and time, target depth (m), tow duration, wire angle (degrees), and volume of ocean water sampled in cubic meters that is calculated from the flow meter readings. Also shown are the dry weights (g) of zooplankton which were standardised to 1,000 cubic meters sampled for the 8.0, 1.7, 1.0, and 0.25 mm size factions as well as for the total sample.

The contact procedure to obtain detail species records from selected plankton sampling stations is available at:

http://www.pac.dfo-mpo.gc.ca/sci/osap/projects/plankton/zooplanktondatabase_e.htm

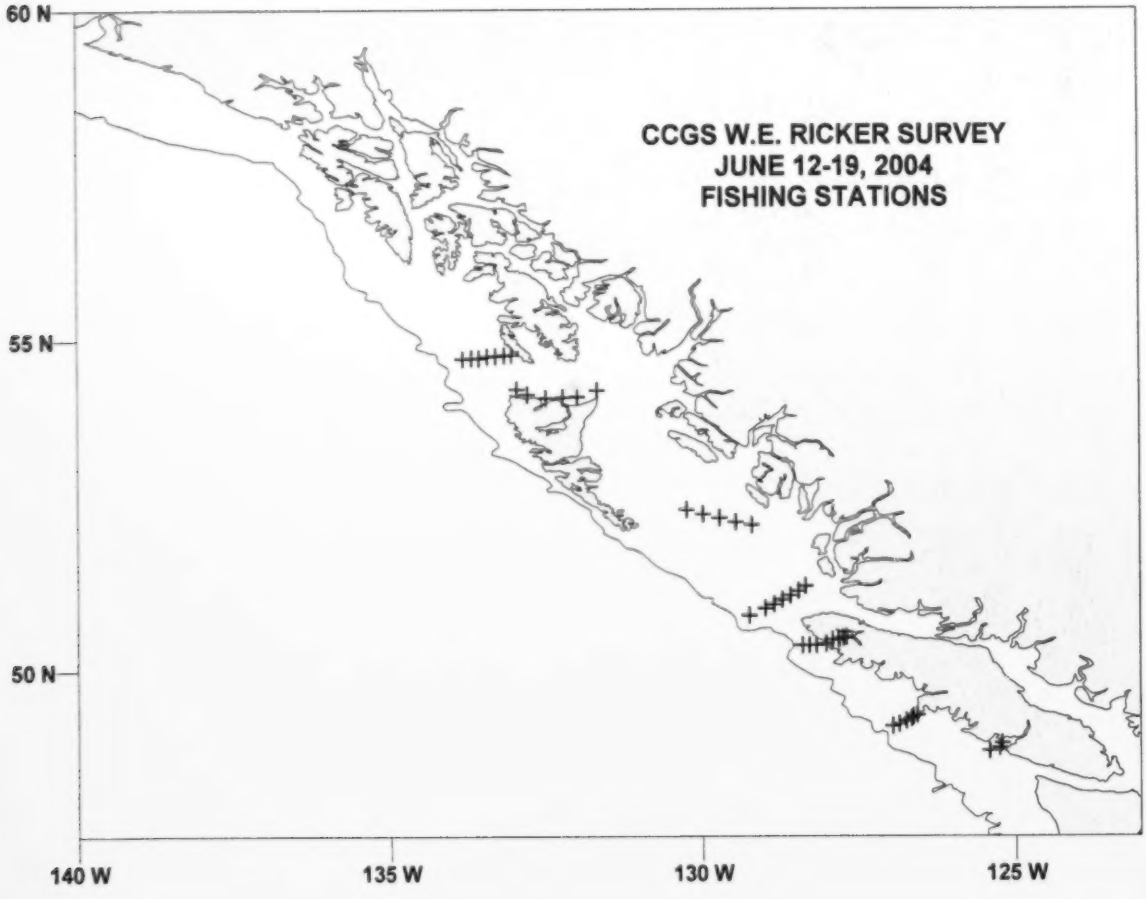

Figure 1. Fishing stations on the CCGS W. E. Ricker survey to the Gulf of Alaska, 12/06/2004 - 19/06/2004.

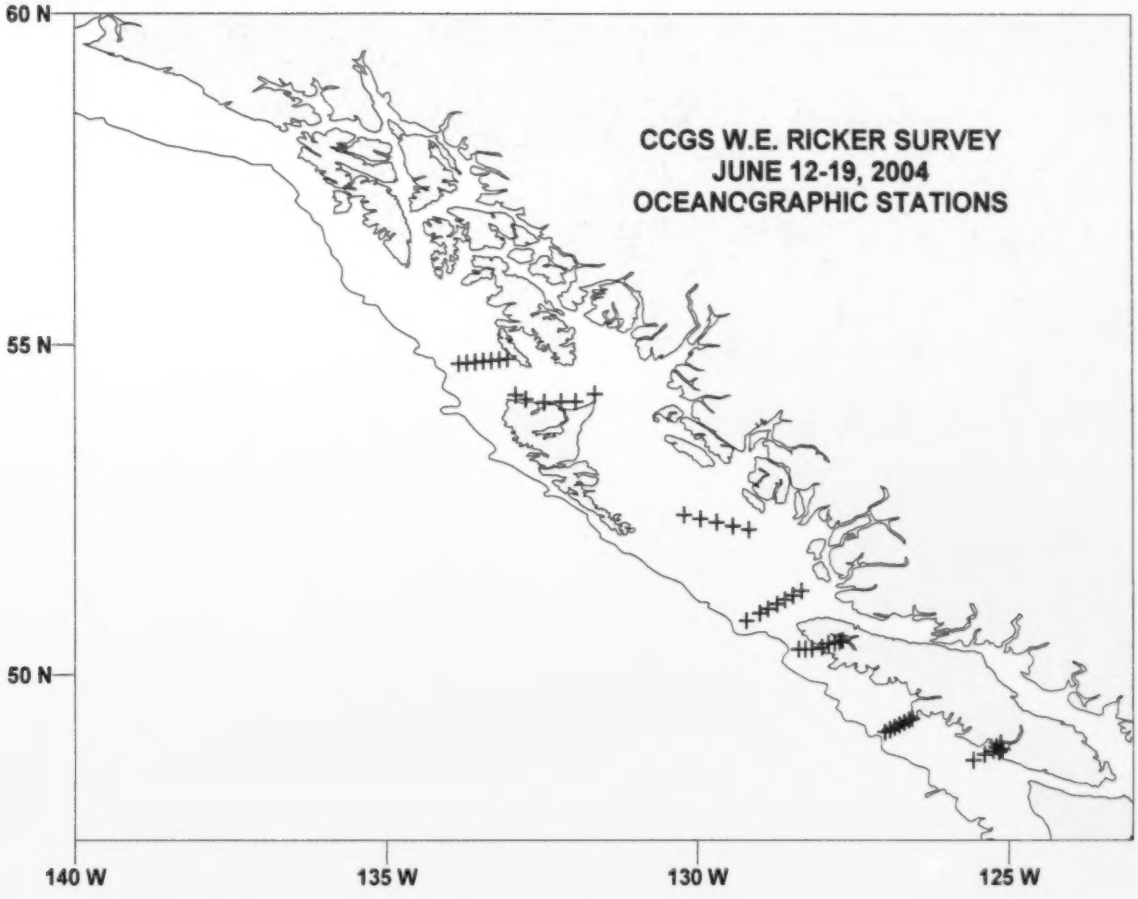

Figure 2. Oceanographic stations on the CCGS W. E. Ricker survey to the Gulf of Alaska, 12/06/2004 - 19/06/2004.

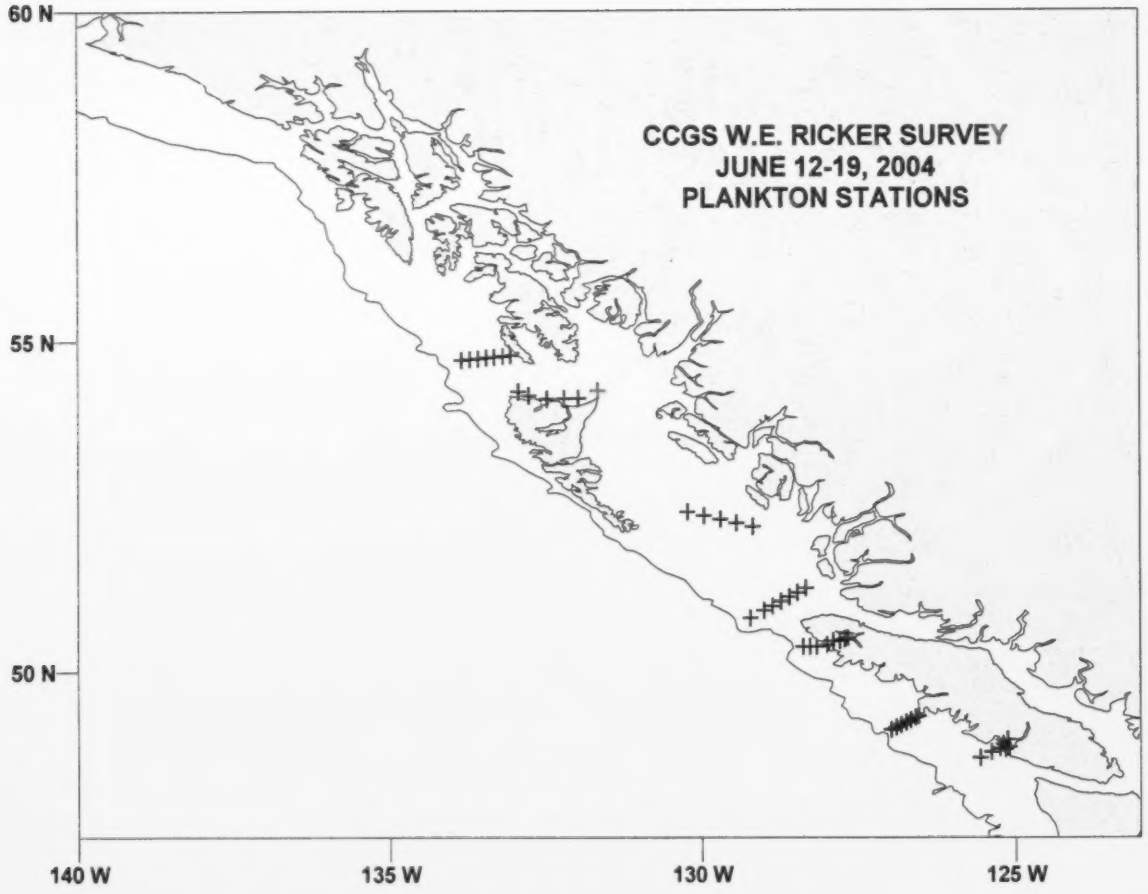

Figure 3. Plankton stations on the CCGS W. E. Ricker survey to the Gulf of Alaska 12/06/2004 - 19/06/2004.

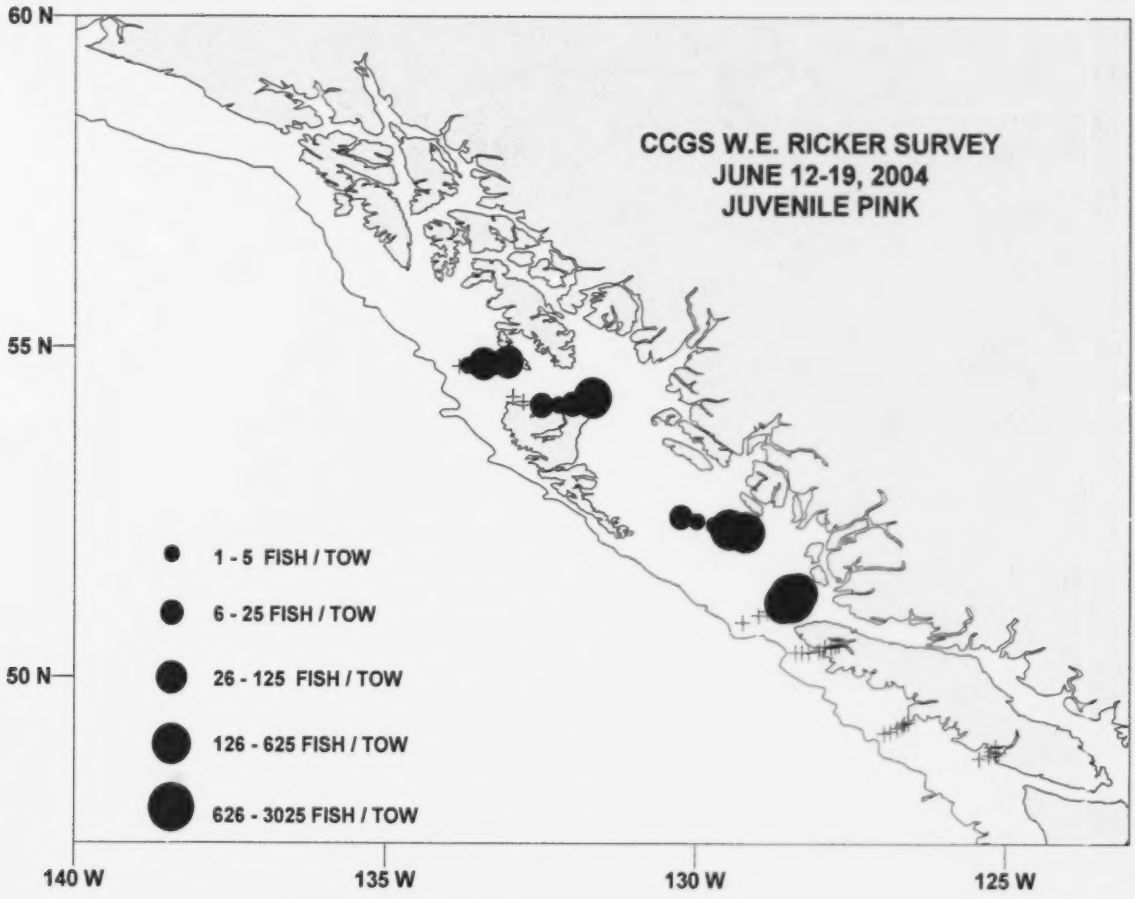

Figure 4. Distribution of age 0.0 juvenile pink salmon catches. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

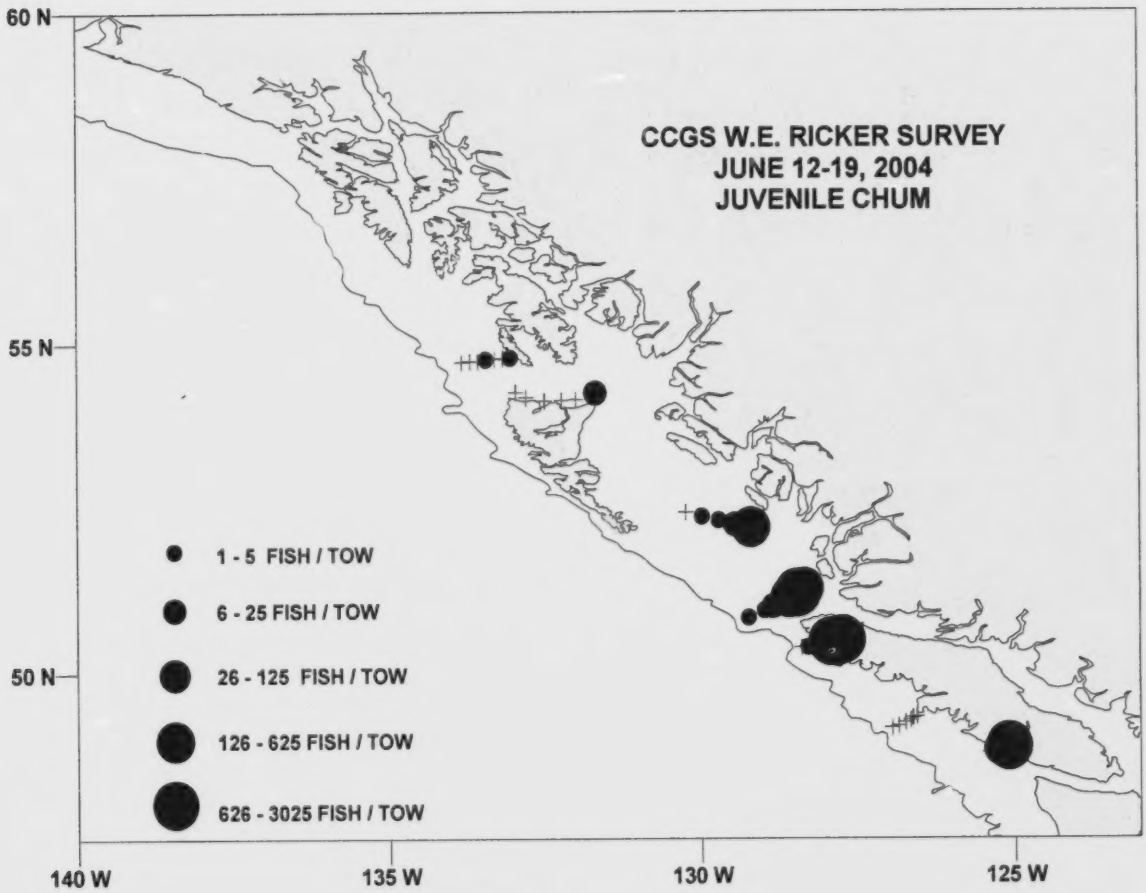

Figure 5. Distribution of age 0.0 juvenile chum salmon catches. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+)

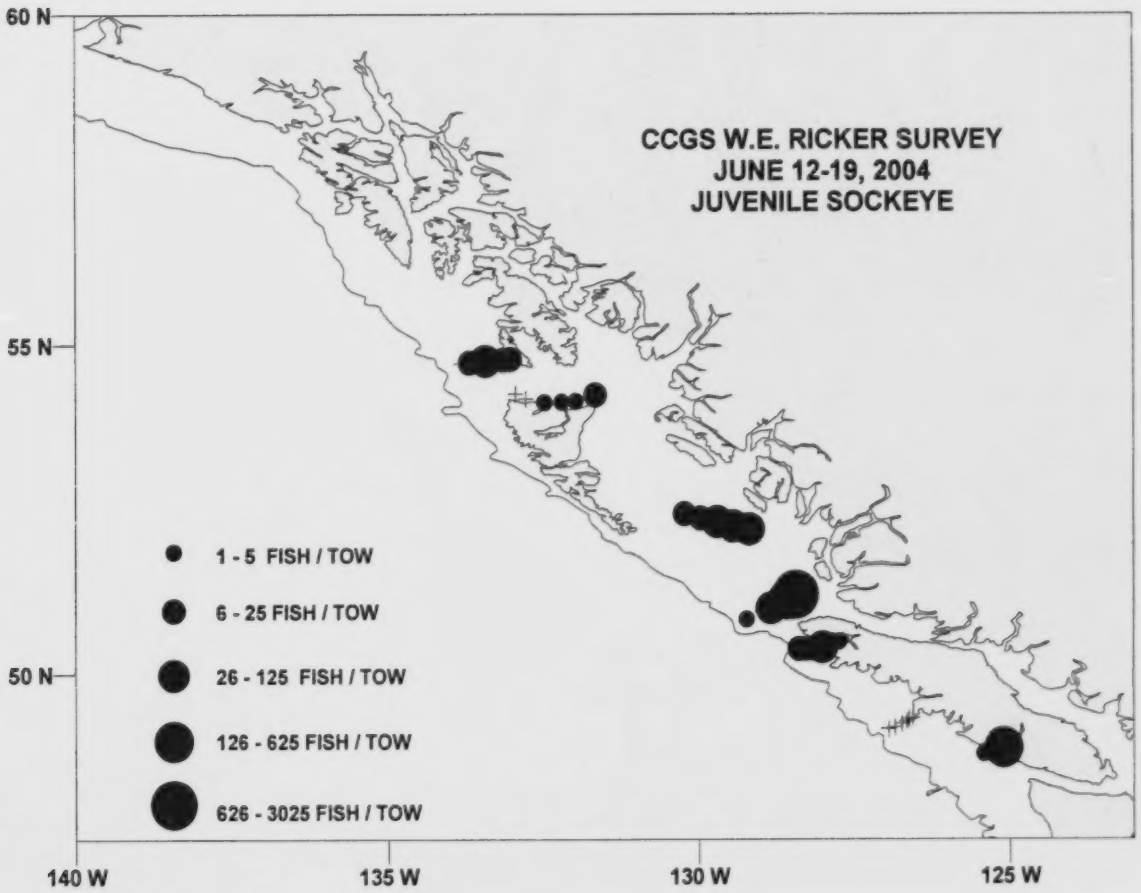

Figure 6. Distribution of age X.0 juvenile sockeye salmon catches. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

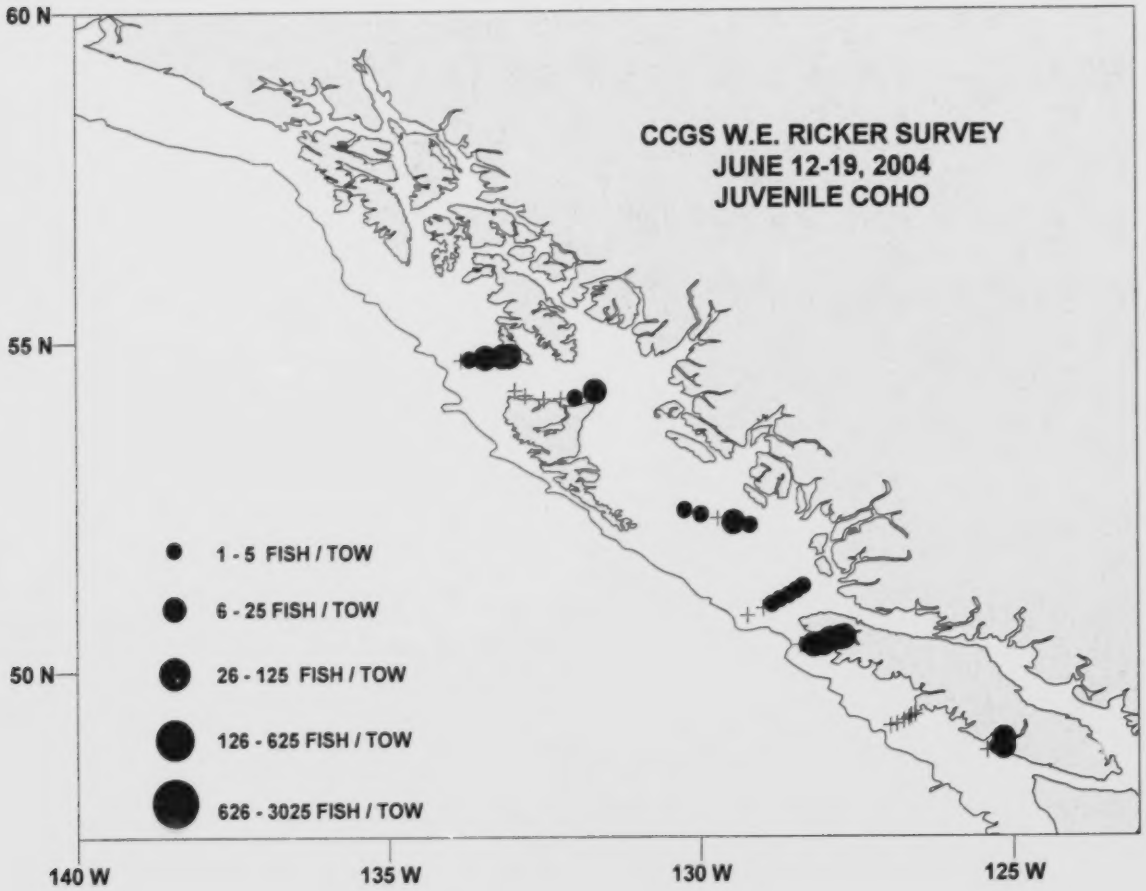

Figure 7. Distribution of age 1.0 juvenile coho salmon catches. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

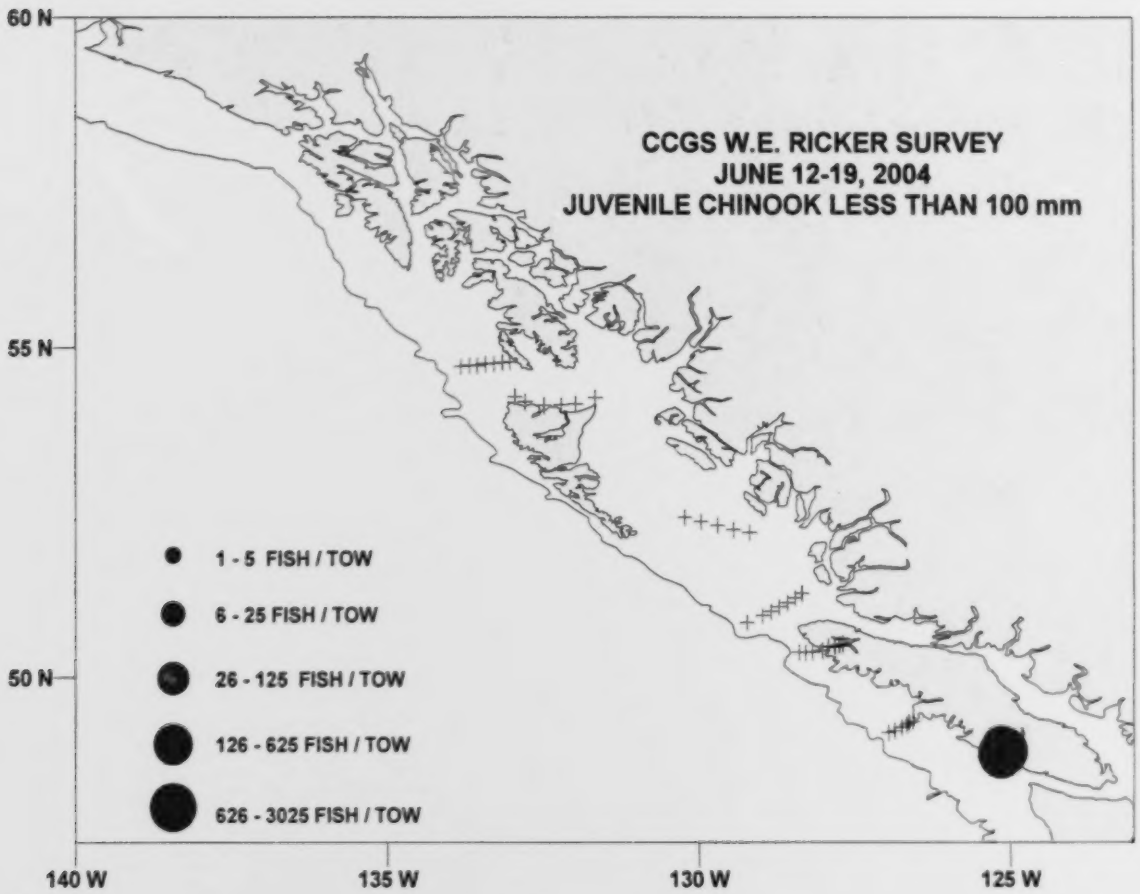

Figure 8. Distribution of catches of juvenile chinook less than 100 mm in fork length. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

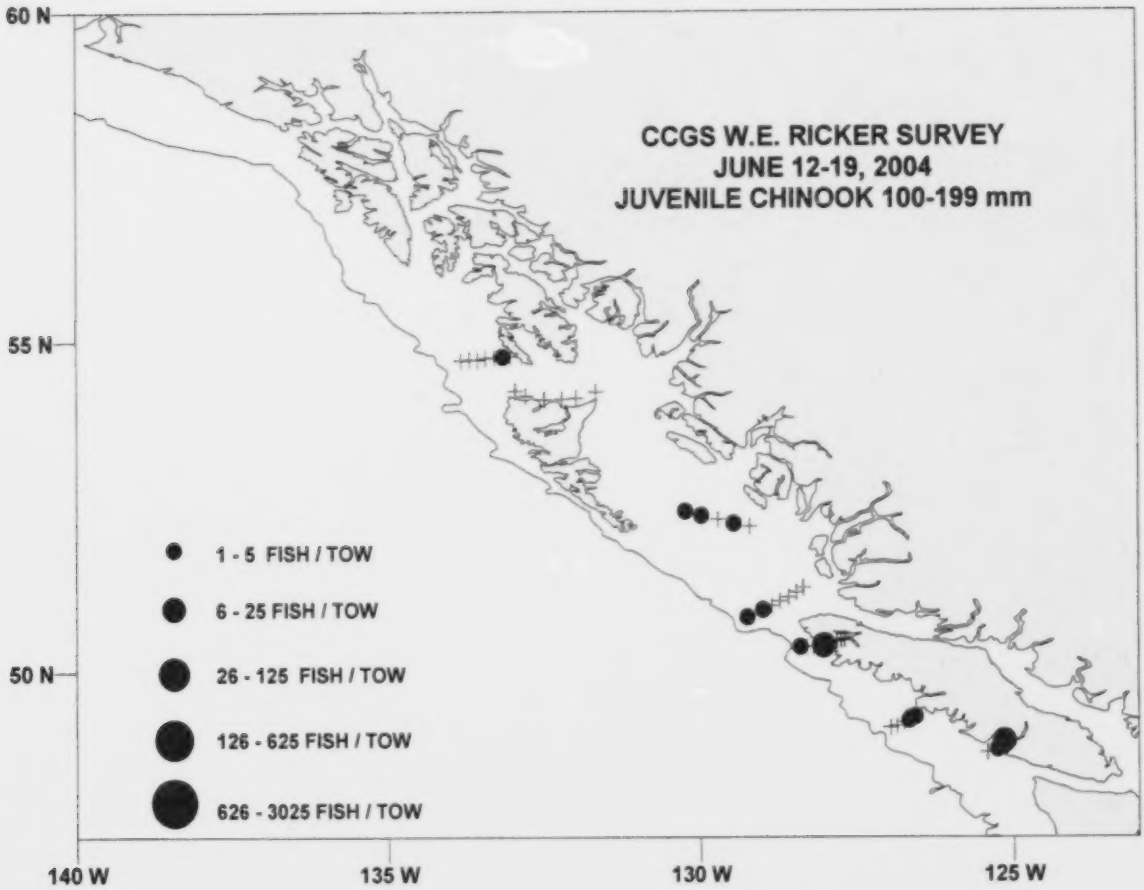

Figure 9. Distribution of catches of juvenile chinook salmon from 100 to 199 mm. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

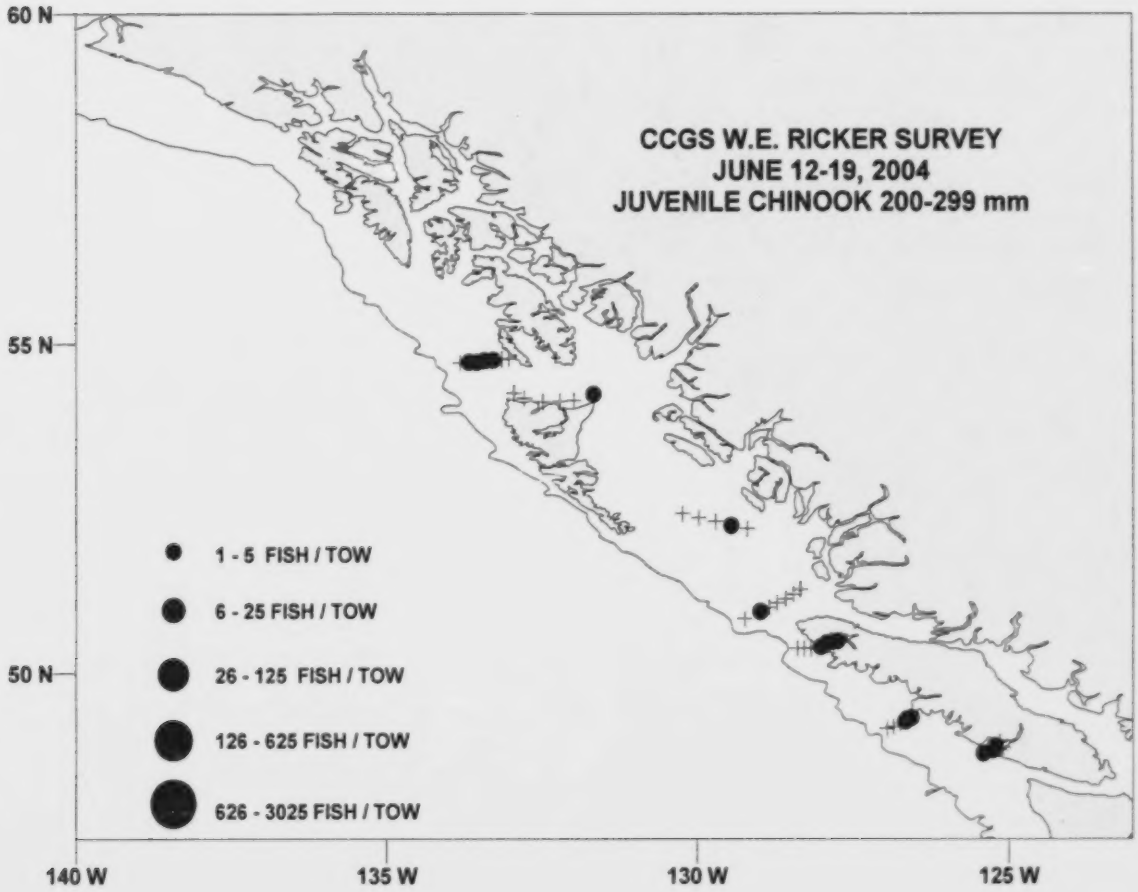

Figure 10. Distribution of catches of juvenile chinook salmon from 200 to 299 mm. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

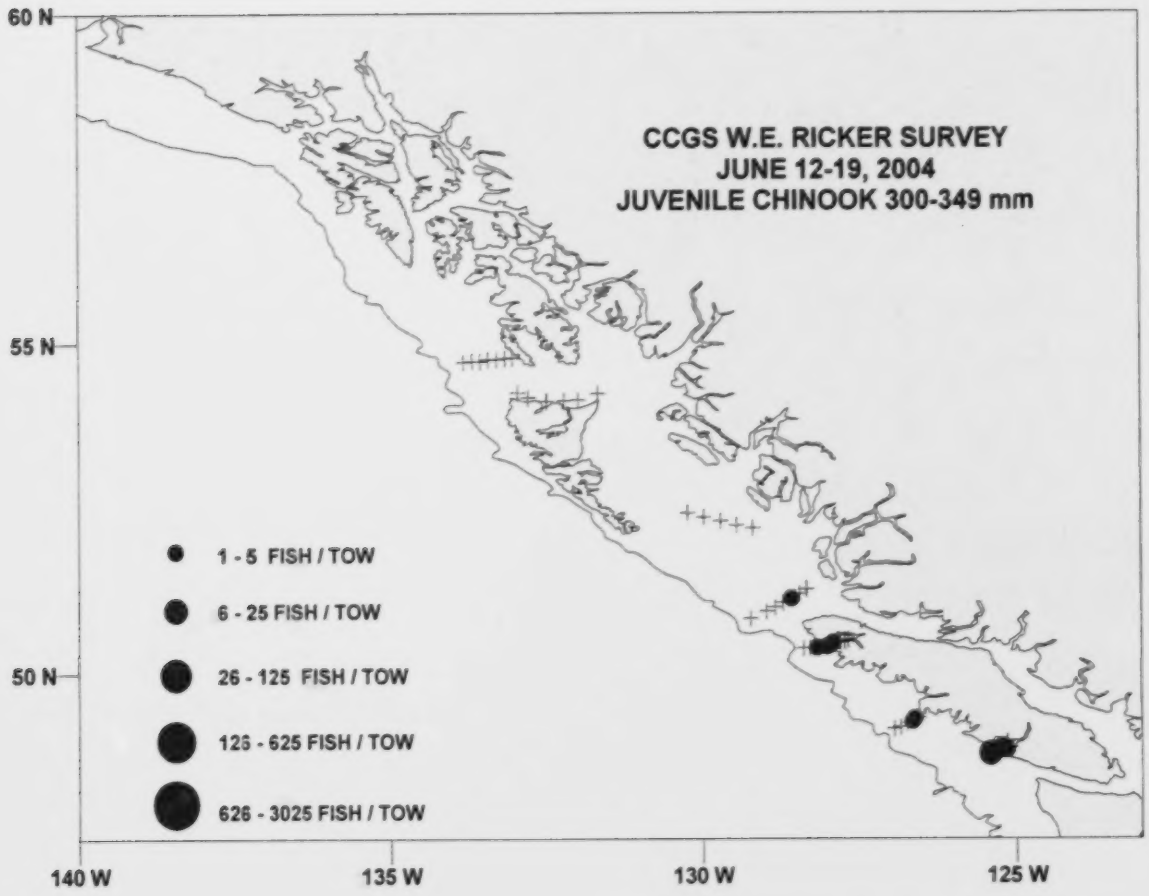

Figure 11. Distribution of catches of juvenile chinook salmon from 300 to 349 mm. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

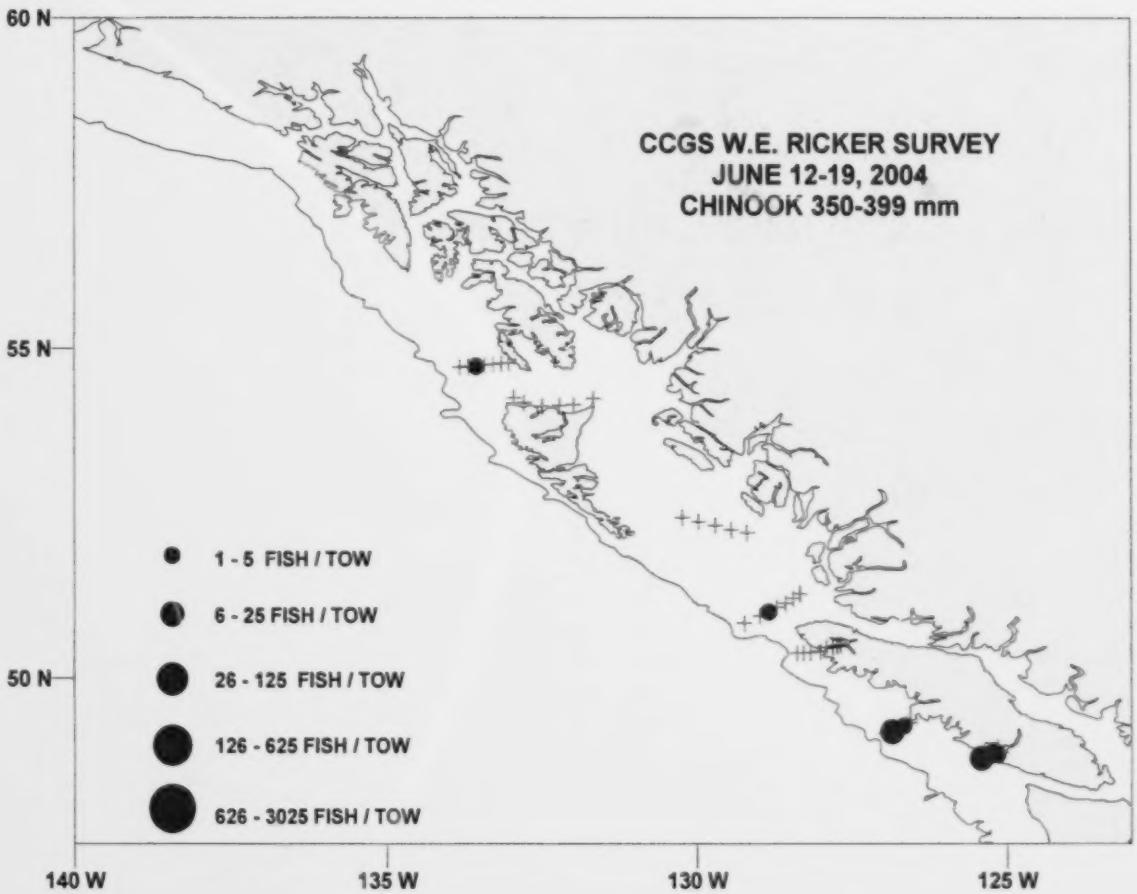

Figure 12. Distribution of catches of chinook salmon from 350 to 399 mm. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

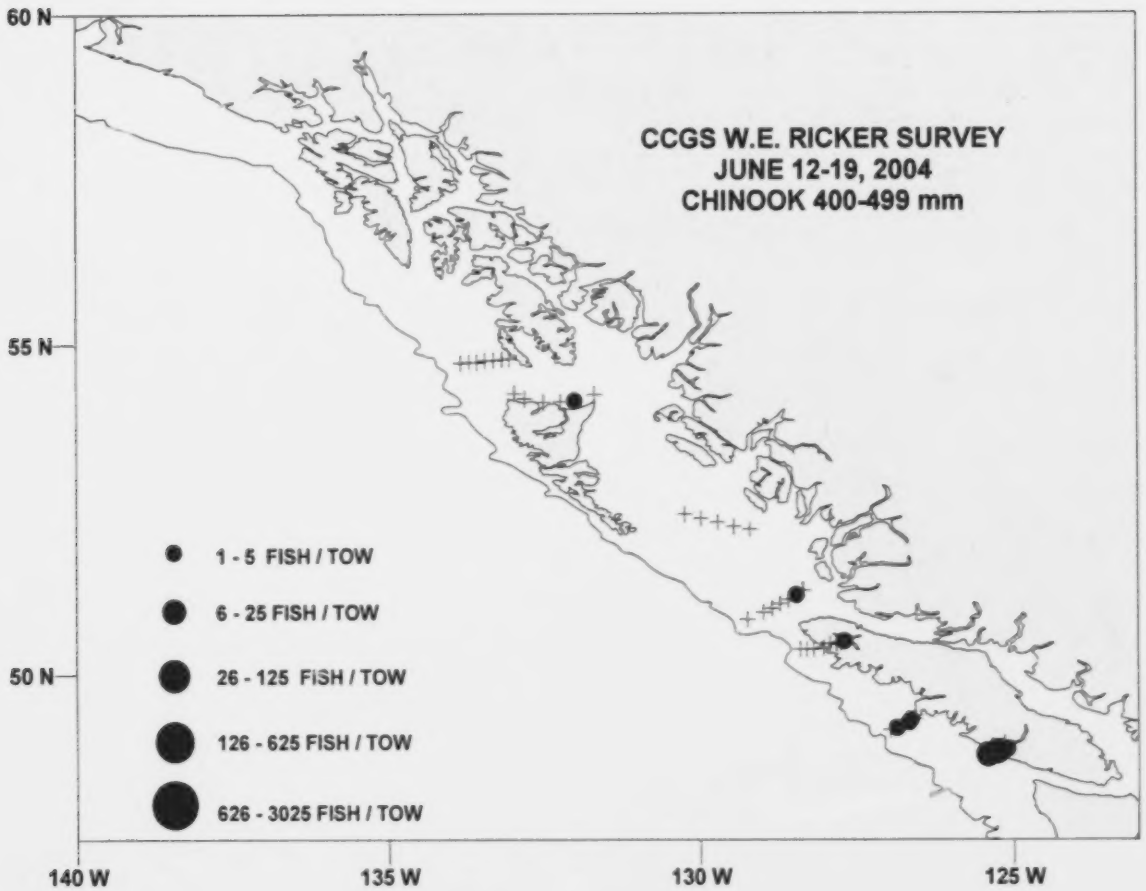

Figure 13. Distribution of catches of chinook salmon from 400 to 499 mm. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

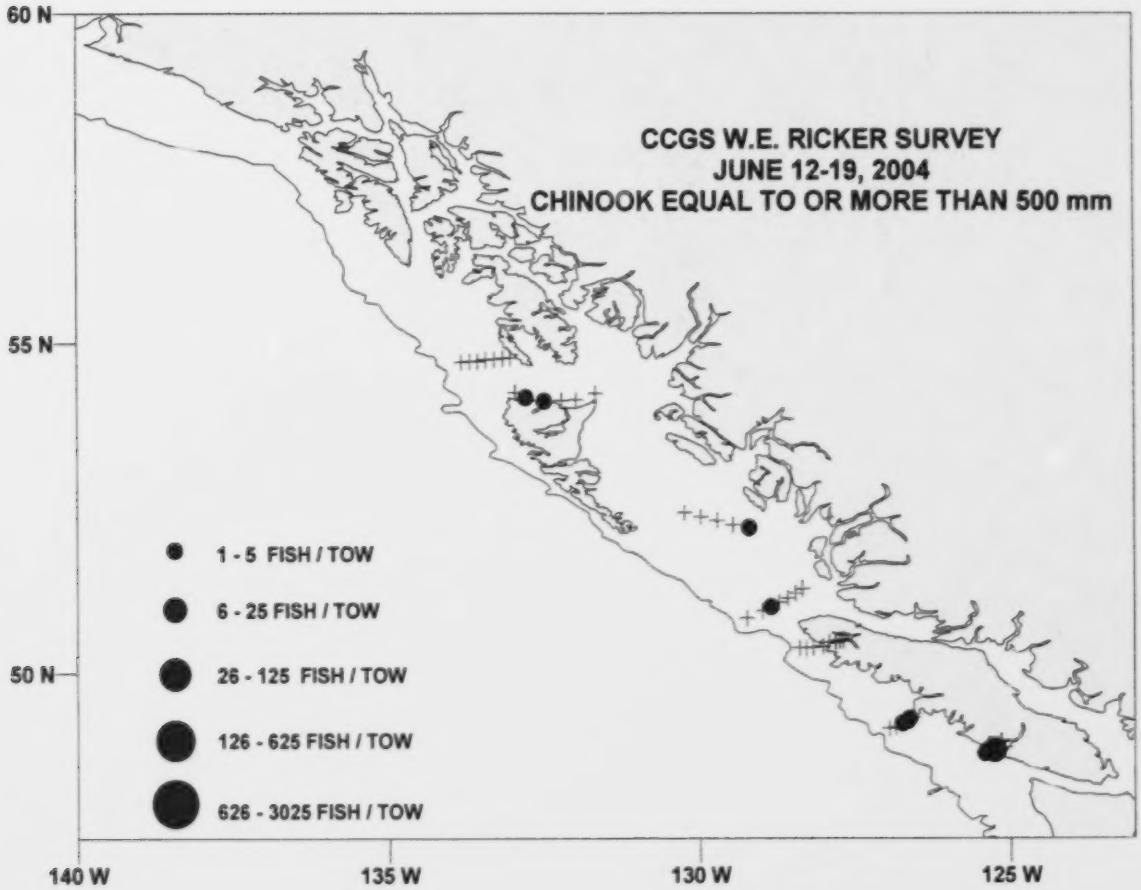

Figure 14. Distribution of of chinook salmon greater than or equal to 500 mm. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

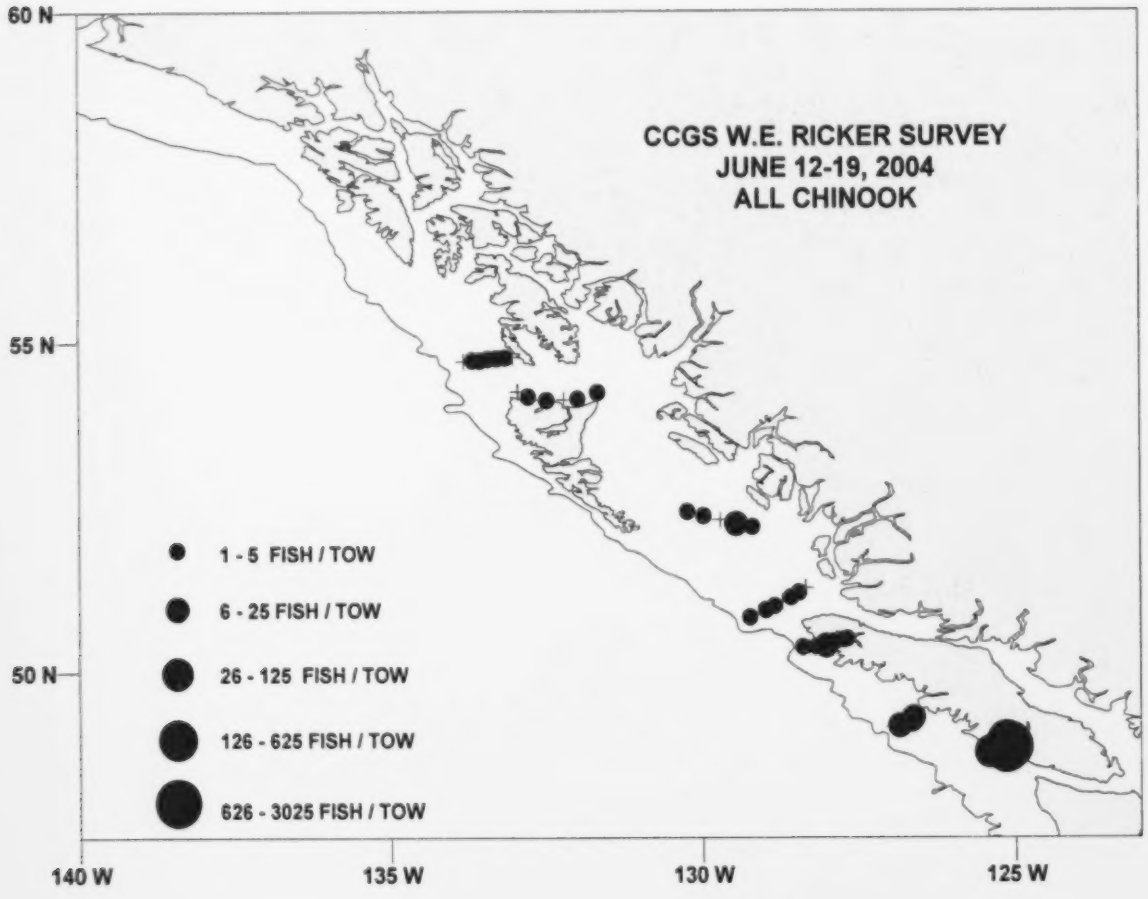

Figure 15. Distribution of catches of chinook from all size classes. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

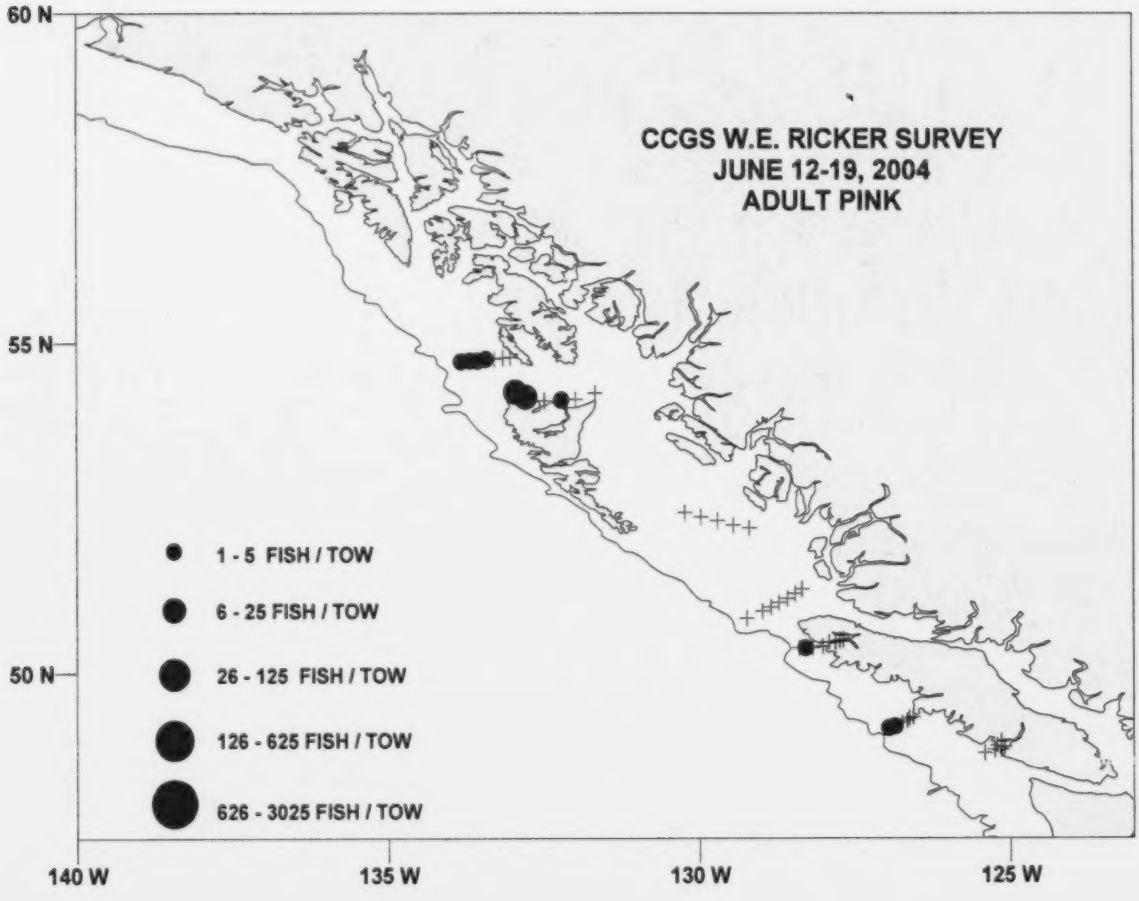

Figure 16. Distribution of age 0.1 adult pink catches. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

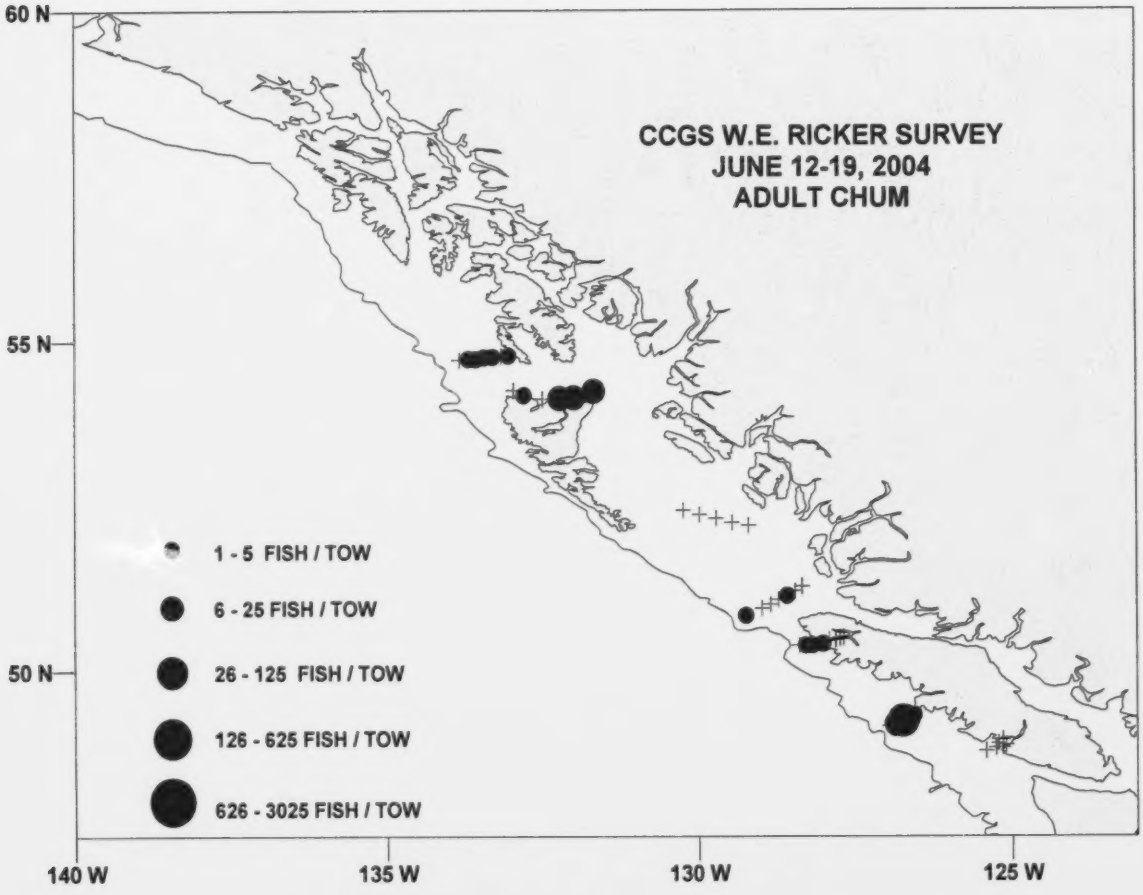

Figure 17. Distribution of adult chum catches. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

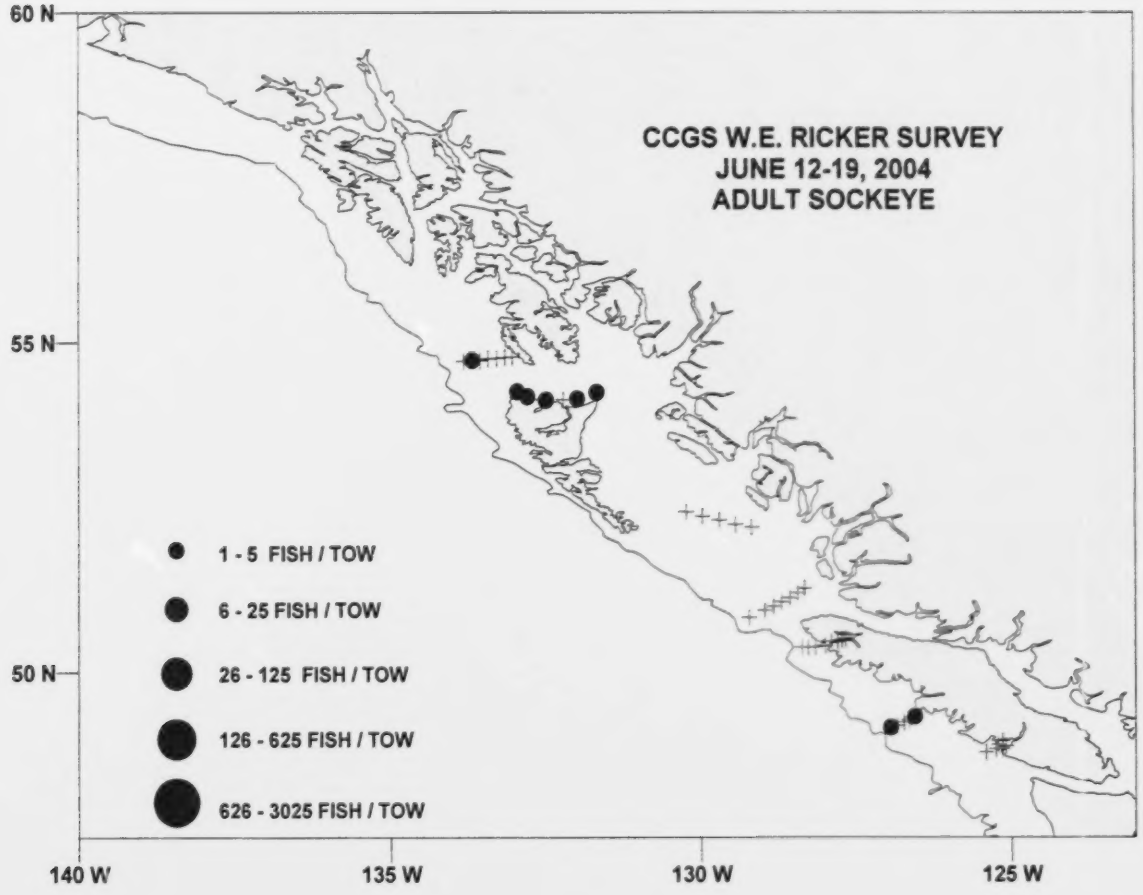

Figure 18. Distribution of adult sockeye catches. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

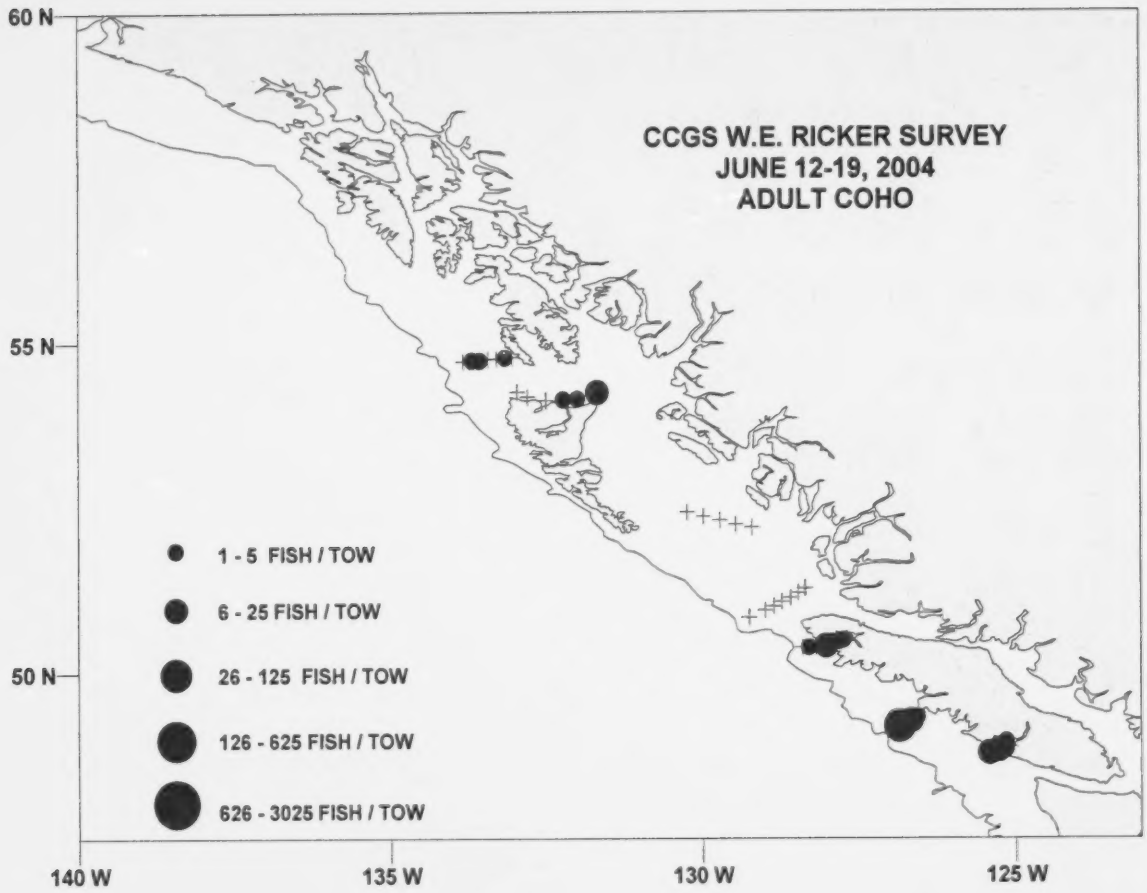

Figure 19. Distribution of adult coho catches. Symbol size (•) is proportional to catch per tow; zero catches are shown by a (+).

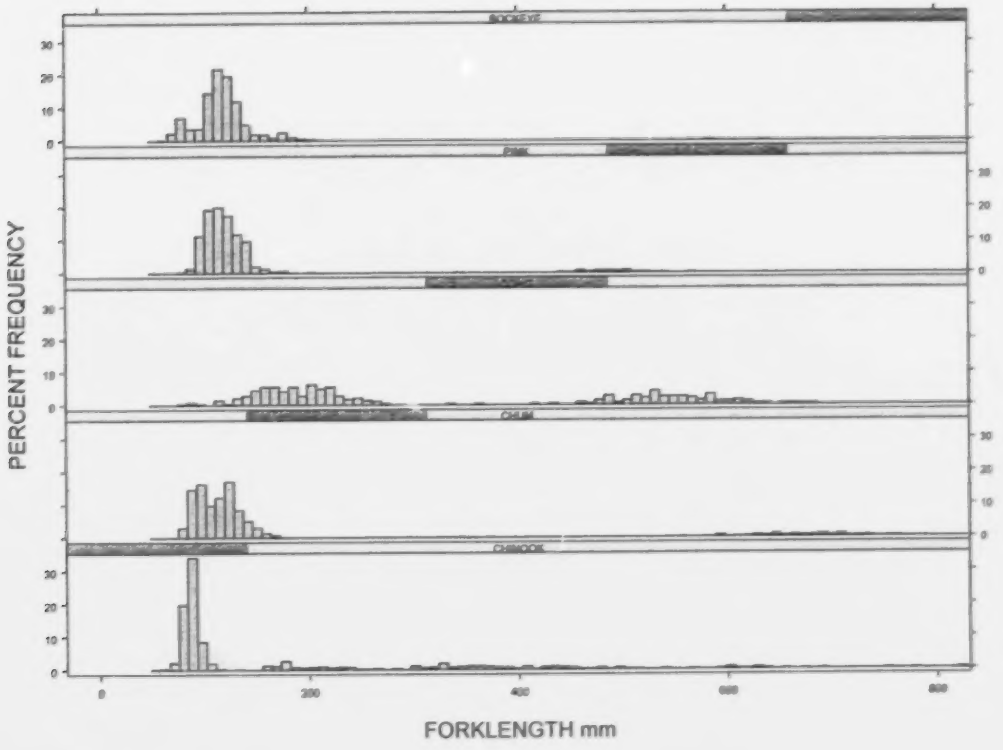

Figure 20. Size distribution (fork length; mm) of Pacific salmon caught on the CCGS W. E. Ricker survey to the Gulf of Alaska, 12/06/2004 - 19/06/2004, 2004.

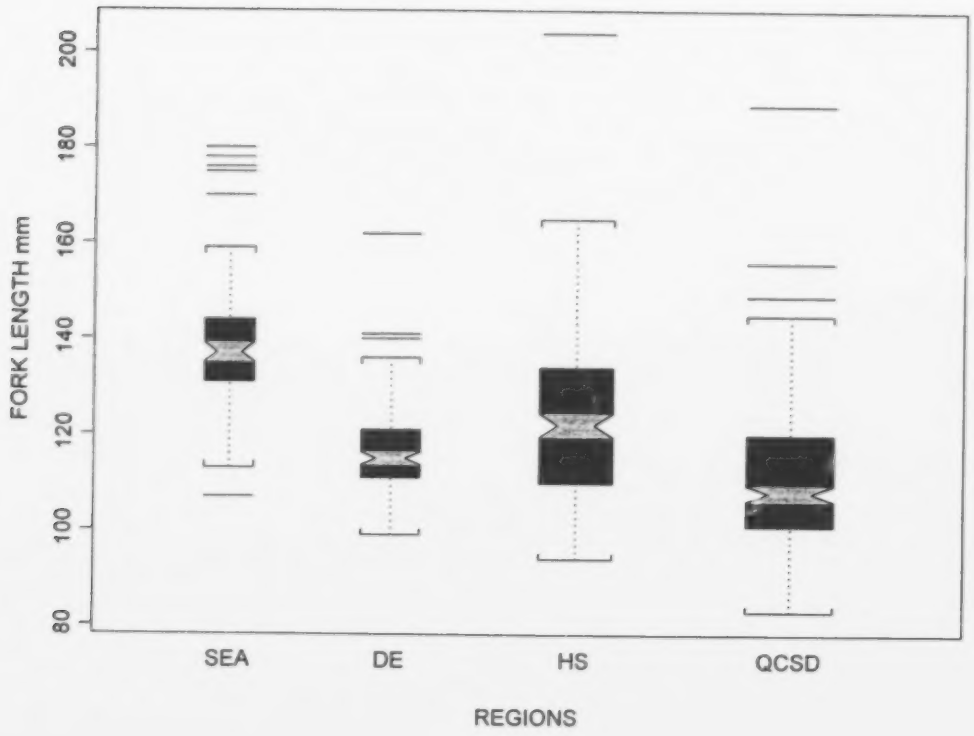

Figure 21. Boxplots of size distributions by region for juvenile pink salmon on the CCGS W. E. Ricker survey to the Gulf of Alaska 12/06/2004 - 19/06/2004. Boxplots for each region are displayed along a latitudinal gradient that runs along the x-axis. The most northern region on the left.

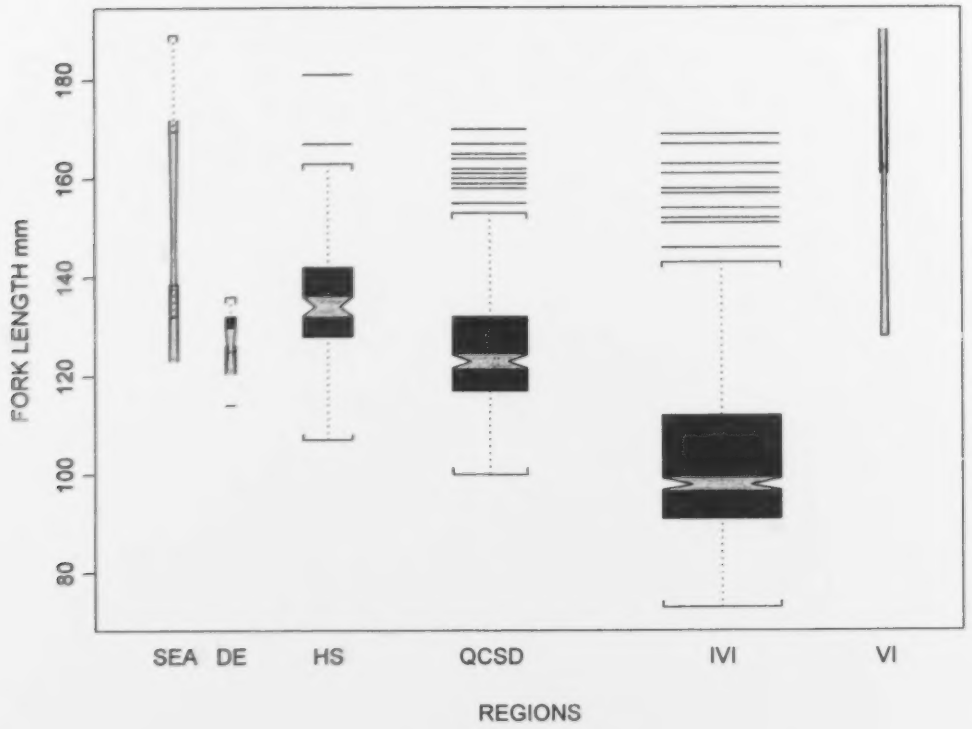

Figure 22. Boxplots of size distributions by region for juvenile chum salmon on the CCGS W. E. Ricker survey to the Gulf of Alaska, 12/06/2004 - 19/06/2004. Boxplots for each region are displayed along a latitudinal gradient that runs along the x-axis. The most northern region on the left.

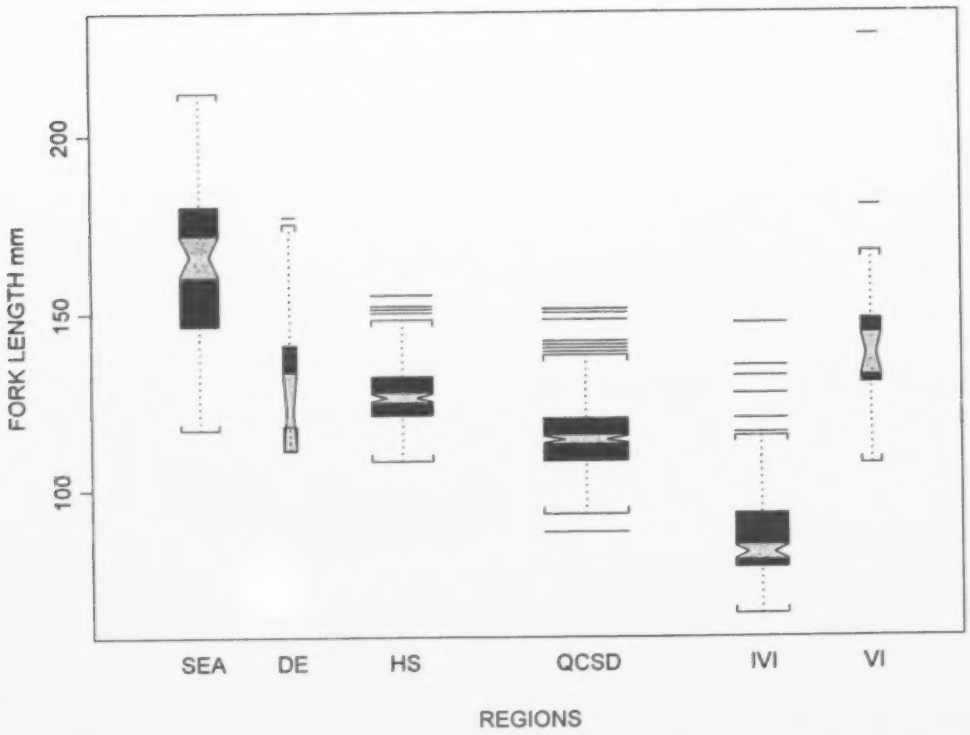

Figure 23. Boxplots of size distributions by region for juvenile sockeye salmon on the CCGS W. E. Ricker survey to the Gulf of Alaska,12/06/2004 - 19/06/2004. Boxplots for each region are displayed along a latitudinal gradient that runs along the x-axis. The most northern region is on the left.

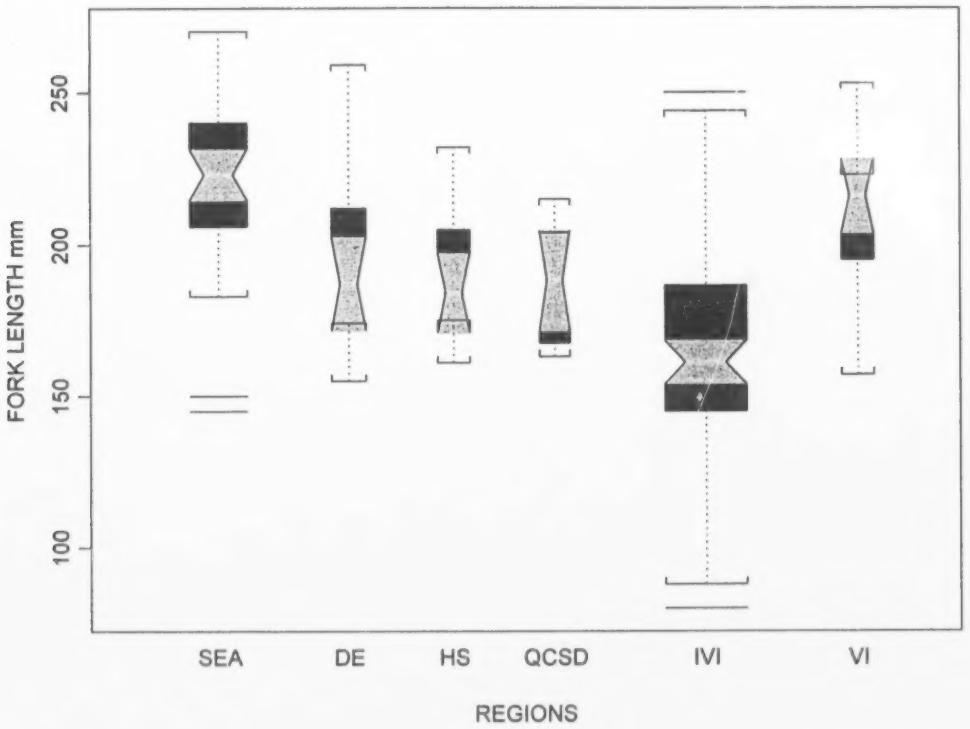

Figure 24. Boxplots of size distributions by region for juvenile coho salmon on the CCGS W. E. Ricker survey to the Gulf of Alaska, 12/06/2004 - 19/06/2004. Boxplots for each region are displayed along a latitudinal gradient that runs along the x-axis. The most northern region is on the left.

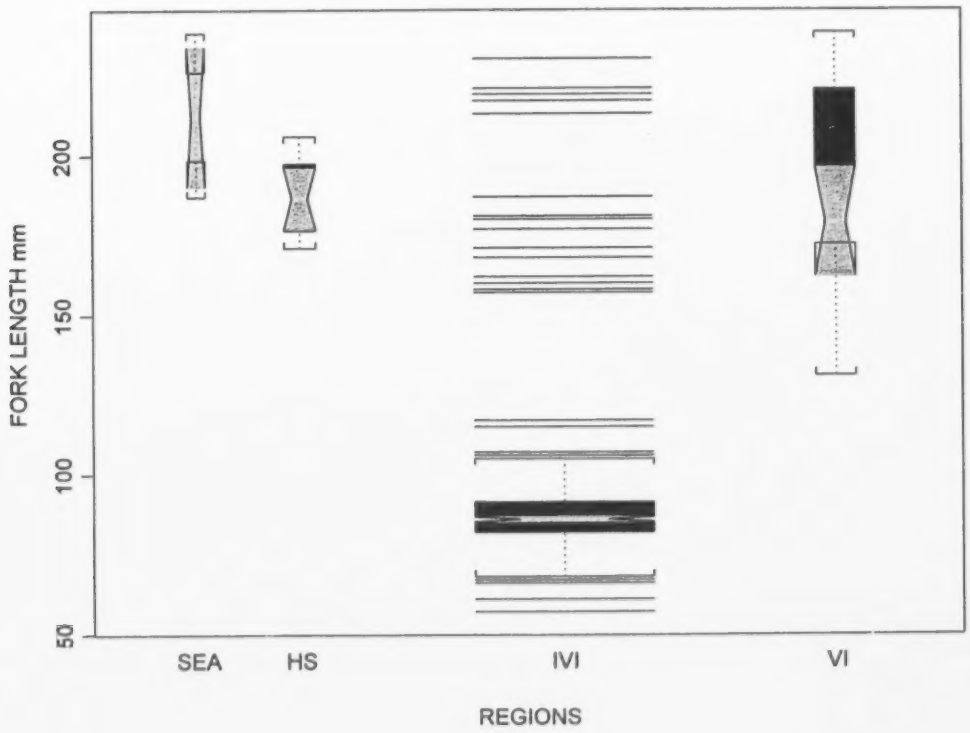

Figure 25. Boxplots of size distributions by region for juvenile chinook salmon on the CCGS W. E. Ricker survey to the Gulf of Alaska 12/06/2004 - 19/06/2004. Boxplots for each region are displayed along a latitudinal gradient that runs along the x-axis. The most northern region is on the left.
